ПРОЧНОСТЬ ДРЕВЕСИНЫ, МОДИФИЦИРОВАННОЙ ПОЛИМЕРНОЙ КОМПОЗИЦИЕЙ С НАНОСТРУКТУРНЫМ НАПОЛНИТЕЛЕМ

Аннотация. Увеличение прочностных свойств деревянных конструкций является важной задачей. Древесина может иметь множество дефектов, связанных с природным строением (пороки) или полученных во время эксплуатации (загнивание, усушка и т.д.). Для повышения прочности древесины и, следовательно, несущей способности конструкций на ее основе, используют как традиционные методы (усиление металлом, бетоном или железобетоном), так и перспективные в настоящее время методы модификации полимерными составами, в том числе сnanoструктурным наполнителем.

В настоящей работе выполнено исследование по определению прочности образцов модифицированной древесины на сжатие вдоль волокон. Были рассмотрены четыре различные смолы и два наполнителя – углеродные нанотрубки и карбоксилированные углеродные нанотрубки, которые добавлялись в связующее в разных процентных соотношениях (от 0 до 1,1 %). В качестве модификации была применена технология импрегнирования низковязкой полимерной композиции в тело древесины с использованием импульсного воздействия избыточного давления по режиму 10-5-10-5-10 мин.

Модифицированные образцы испытывались при кратковременном действии нагрузок до разрушения. Результатами испытания на образцах определена возможность повышения прочности и снижения деформативности деревянных конструкций, модифицированных полимерной композицией на основе смолы с добавлением nanoструктурного наполнителя.

Ключевые слова: строительство, древесина, модификация, полимер, прочность.

STRENGTH OF WOOD MODIFIED WITH POLYMER COMPOSITION WITH NANOSTRUCTURED FILLER

Abstract. Increasing the strength properties of wooden structures is an important task. Wood can have many defects associated with the natural structure (defects) or obtained during operation (rotting, shrinkage, etc.). To increase the strength of wood and, consequently, the bearing capacity of structures based on it, both traditional methods (reinforcement with metal, concrete or reinforced concrete) and currently promising methods of modification with polymer compositions, including those with nanostructured filler, are used.

In this work, a study was carried out to determine the compressive strength of modified wood samples along the fibers. Four different resins and two fillers were considered - carbon nanotubes and carboxylated carbon nanotubes, which were added to the binder in different percentages (from 0 to 1.1%). As a modification, the technology of impregnating a low-viscosity polymer composition into the wood body was applied using pulsed overpressure according to the 10-5-10-5-10 min mode.

Modified specimens were tested under short-term loads until failure. The results of testing on samples determined the possibility of increasing the strength and deformability of a wooden structure modified with a resin-based polymer composition with the addition of a nanostructured filler.

Keywords: building, wood, modification, polymer, strength.

Информация об авторах:

Лисятников Михаил Сергеевич

ФГБОУ ВО «Владimirский государственный университет имени Александра Григорьевича и Николая Григорьевича Столетовых», г. Владимир, Россия
кандидат технических наук, доцент, доцент кафедры строительных конструкций.
E-mail: mlisyatnikov@mail.ru

Лукин Михаил Владимирович

ФГБОУ ВО «Владimirский государственный университет имени Александра Григорьевича и Николая Григорьевича Столетовых», г. Владимир, Россия
кандидат технических наук, доцент, доцент кафедры строительных конструкций.
E-mail: mikail_lukin_22@mail.ru

Чибрикин Данила Александрович

ФГБОУ ВО «Владimirский государственный университет имени Александра Григорьевича и Николая Григорьевича Столетовых», г. Владимир, Россия
ассистент кафедры строительных конструкций.
E-mail: mikail_lukin_22@mail.ru

Рощина Светлана Ивановна

ФГБОУ ВО «Владimirский государственный университет имени Александра Григорьевича и Николая Григорьевича Столетовых», г. Владимир, Россия
доктор технических наук, профессор, заведующий кафедрой строительных конструкций.
E-mail: rsi3@mail.ru

Information about authors:

Lisyatnikov Mikhail S.

Vladimir State University named after Alexander and Nikolay Stoletovs, Vladimir, Russia,
candidate of technical science, docent, associated professor of the department of building construction.
E-mail: mlisyatnikov@mail.ru

Lukin Mikhail V.

Vladimir State University named after Alexander and Nikolay Stoletovs, Vladimir, Russia,
candidate of technical science, docent, associated professor of the department of building construction.
E-mail: mikail_lukin_22@mail.ru

Chibrikin Danila A.

Vladimir State University named after Alexander and Nikolay Stoletovs, Vladimir, Russia,
assistant of the department of building construction.
E-mail: dachibrikin@outlook.com

Roshchina Svetlana I.

Vladimir State University named after Alexander and Nikolay Stoletovs, Vladimir, Russia,
doctor of technical sciences, professor, head of the department of building structures.
E-mail: rsi3@mail.ru
